

## 16-Channel Low Harmonic Distortion High-Voltage Analog Switches

### Features

- 16-channel High-voltage Analog Switch
- Low Harmonic Distortion
- Integrated Bleed Resistors on the Outputs for HV2705
- 3.3V Input Logic Level Compatible
- -60 dB typical OFF-isolation at 5 MHz
- 20 MHz Data Shift Clock Frequency
- 10  $\mu$ A Low-quiescent Power Dissipation
- Low Parasitic Capacitance
- DC to 50 MHz Small-signal Frequency Response
- CMOS logic Circuitry for Low Power
- Cascadable Serial Data Register with Latches
- Flexible Operating Supply Voltages

### Applications

- Medical Ultrasound Imaging
- Non-destructive Metal Flaw Detection
- Piezoelectric Transducer Drivers
- Optical MEMS Modules

### Description

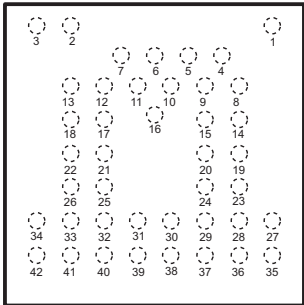

The HV2605 and HV2705 are 16-channel low harmonic distortion high-voltage analog switch integrated circuits (ICs). These devices are designed for applications requiring high-voltage switching controlled by low-voltage control signals, such as medical ultrasound imaging and other piezoelectric transducer drivers. The HV2705 has integrated bleed resistors which eliminate voltage build-up on capacitive loads such as piezoelectric transducers.

These ICs shift input data into a 16-bit Shift register that can then be retained in a 16-bit latch. To reduce any possible clock feed-through noise, the latch enable bar should be left high until all bits are clocked in. Data are clocked in during the rising edge of the clock. This device combines high-voltage, bilateral DMOS switches and low-power CMOS logic to provide efficient control of high-voltage analog signals.

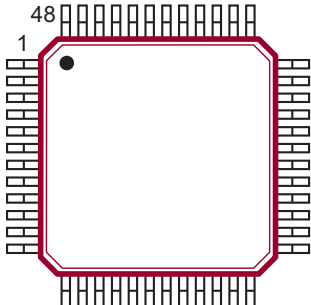

The device is suitable for various combinations of high-voltage supplies, e.g.,  $V_{PP}/V_{NN}$ : +40V/-160V, +100V/-100V and +160V/-40V.

### Package Types

**42-Ball Bumped Die**  
(Top view)

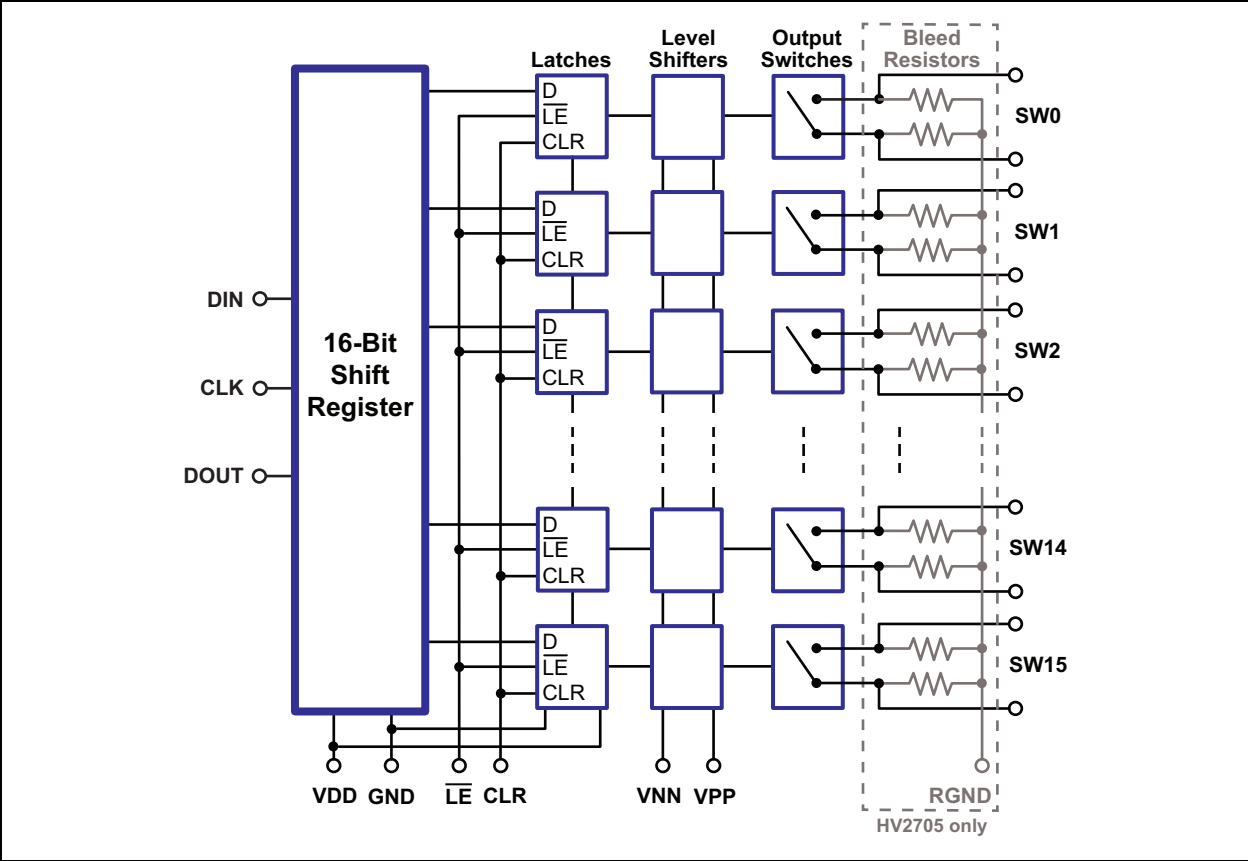

**48-lead LQFP**  
(Top view)

See [Table 2-1](#) and [Table 2-2](#) for pin information.

# HV2605/HV2705

## Functional Block Diagram

## 1.0 ELECTRICAL CHARACTERISTICS

### ABSOLUTE MAXIMUM RATINGS†

Logic Supply, $V_{DD}$ .....	-0.5V to +7V
Differential Supply, $V_{PP}-V_{NN}$ .....	220V
Positive Supply, $V_{PP}$ .....	-0.5V to $V_{NN} + 200V$
Negative Supply, $V_{NN}$ .....	+0.5V to -200V
Logic Input Voltage .....	-0.5V to $V_{DD} + 0.3V$
Analog Signal Range .....	$V_{NN}$ to $V_{PP}$
Peak Analog Signal Current/Channel .....	3A
Storage Temperature, $T_S$ .....	-65°C to 150°C
Power Dissipation:	
42-Ball Bumped Die .....	1.5W
48-lead LQFP .....	1W

† **Notice:** Stresses above those listed under “Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

### RECOMMENDED OPERATING CONDITIONS

Parameter	Sym.	Min.	Typ.	Max.	Unit	Conditions
Logic Power Supply Voltage	$V_{DD}$	3	—	5.5	V	<a href="#">Note 1</a> , <a href="#">Note 3</a>
Positive High-voltage Supply	$V_{PP}$	40	—	$V_{NN}+200V$	V	<a href="#">Note 1</a> , <a href="#">Note 3</a>
Negative High-voltage Supply	$V_{NN}$	-40	—	-160	V	<a href="#">Note 1</a> , <a href="#">Note 3</a>
High-level Input Voltage	$V_{IH}$	$0.9 V_{DD}$	—	$V_{DD}$	V	
Low-level Input Voltage	$V_{IL}$	0	—	$0.1 V_{DD}$	V	
Analog Signal Voltage Peak-to-peak	$V_{SIG}$	$V_{NN} + 10V$	—	$V_{PP}-10V$	V	<a href="#">Note 2</a>

**Note 1:** Power-up/power-down sequence is arbitrary except GND must be powered up first and powered down last.

**2:**  $V_{SIG}$  must be  $V_{NN}$  and  $V_{PP}$  or floating during power-up/power-down transition.

**3:** Rise and fall times of power supplies  $V_{DD}$ ,  $V_{PP}$  and  $V_{NN}$  should not be less than 1 millisecond.

X	X	X	X	X	X	X	H	L	HOLD PREVIOUS STATE						
X	X	X	X	X	X	X	X	H	ALL SWITCHES OFF						

- Note 1:** The 16 switches operate independently.
- 2:** Serial data is clocked in on the low-to-high transition of the clock.
- 3:** All 16 switches go to a state retaining their latched condition at the rising edge of  $\overline{LE}$ . When  $\overline{LE}$  is low, the Shift registers data flow through the latch.
- 4:**  $D_{OUT}$  is high when data in the Shift register 15 is high.
- 5:** Shift registers clocking has no effect on the switch states if  $\overline{LE}$  is high.
- 6:** The CLR clear input overrides all other inputs.

## 4.0 PACKAGING INFORMATION

### 4.1 Package Marking Information

**Legend:** XX...X Product Code or Customer-specific information  
Y Year code (last digit of calendar year)  
YY Year code (last 2 digits of calendar year)  
WW Week code (week of January 1 is week '01')  
NNN Alphanumeric traceability code  
<sup>e3</sup> Pb-free JEDEC<sup>®</sup> designator for Matte Tin (Sn)  
\* This package is Pb-free. The Pb-free JEDEC designator (<sup>e3</sup>) can be found on the outer packaging for this package.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for product code or customer-specific information. Package may or not include the corporate logo.

## 42-Ball Bumped Die Package Outline (BD)

5.29x5.30mm body, 1.02mm height (max), 0.52 / 0.60mm pitch

**Notes:** For the most current package drawings, See the Microchip Packaging Specification at [www.microchip.com/packaging](http://www.microchip.com/packaging).

**Notes:**

- Ball 1 identifier must be located in the index area indicated. Ball 1 identifier can be: a molded mark/identifier; an embedded metal marker; or a printed indicator.

**Note:** For more information about ball coordinates, contact Microchip sales.

# HV2605/HV2705

## 48-Lead LQFP Package Outline (FG)

7.00x7.00mm body, 1.60mm height (max), 0.50mm pitch

Note: For the most current package drawings, see the Microchip Packaging Specification at [www.microchip.com/packaging](http://www.microchip.com/packaging).

**Note:**

1. A Pin 1 identifier must be located in the index area indicated. The Pin 1 identifier can be: a molded mark/identifier; an embedded metal marker; or a printed indicator.

JEDEC Registration MS-026, Variation BBC, Issue D, Jan. 2001.

\* This dimension is not specified in the JEDEC drawing.

Drawings are not to scale.

## APPENDIX A: REVISION HISTORY

### Revision A (November 2017)

- Converted Supertex Doc # DSFP-HV2605 and Doc # DSFP-HV2705-HV2706 to Microchip DS20005498A
- Removed HV2706 from the document. HV2706 is EOL.
- Combined HV2605 and HV2705 into one document
- Changed the package marking format
- Added information for 42-Ball Bumped Die package
- Removed the “HVCMOS technology for high performance” in the Features section
- Made minor text changes throughout the document

# HV2605/HV2705

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>	<u>XX</u>	-	<u>X</u>	-	<u>X</u>

	M936	= 2500/Reel for a BD package																																																									

**Note:** HV2605BD and HV2705BD are RoHS-compliant products

---

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
