

## 300 mA CMOS LDO with Shutdown, Bypass and Independent Delayed Reset Function

### Features

- LDO with Integrated Microcontroller Reset Monitor Functionality
- Low Input Supply Current (80  $\mu$ A, typical)
- Very Low Dropout Voltage
- 10  $\mu$ sec (typ.) Wake-Up Time from  $\overline{\text{SHDN}}$
- 300 mA Output Current
- Standard or Custom Output and Detected Voltages
- Power-Saving Shutdown Mode
- Bypass Input for Quiet Operation
- Separate Input for Detected Voltage
- 140 msec Minimum  $\overline{\text{RESET}}$  Output Duration
- Space-Saving MSOP Package
- Specified Junction Temperature Range:  
-40°C to +125°C

### Applications

- Battery-Operated Systems
- Portable Computers
- Medical Instruments
- Pagers
- Cellular / GSM / PHS Phones

### Package Type

### General Description

The TC1300 combines a low dropout regulator and a microcontroller reset monitor in an 8-Pin MSOP package. Total supply current is 80  $\mu$ A (typical), 20 to 60 times lower than bipolar regulators.

The TC1300 has a precise output with a typical accuracy of  $\pm 0.5\%$ . Other key features include low noise operation, low dropout voltage and internal feed-forward compensation for fast response to step changes in load. The TC1300 has both over-temperature and over-current protection. When the shutdown control ( $\overline{\text{SHDN}}$ ) is low, the regulator output voltage falls to zero,  $\overline{\text{RESET}}$  output remains valid and supply current is reduced to 30  $\mu$ A (typical). The TC1300 is rated for 300 mA of output current and stable with a 1  $\mu$ F output capacitor.

An active-low  $\overline{\text{RESET}}$  is asserted when the detected voltage ( $V_{\text{DET}}$ ) falls below the reset voltage threshold. The  $\overline{\text{RESET}}$  output remains low for 300 msec (typical) after  $V_{\text{DET}}$  rises above reset threshold. The TC1300 also has a fast wake-up response time (10  $\mu$ sec., typical) when released from shutdown.

### Typical Application Circuit

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings\*

Input Voltage .....6.5V  
 Output Voltage ..... (V<sub>SS</sub> - 0.3) to (V<sub>IN</sub> + 0.3)  
 Power Dissipation ..... Internally Limited (**Note 6**)  
 Operating Junction Temperature, T<sub>J</sub> ..... - 40°C < T<sub>J</sub> < 150°C  
 Maximum Junction Temperature, T<sub>J</sub> ..... 150°C  
 Storage Temperature..... - 65°C to +150°C  
 Maximum Voltage on Any Pin ..... (V<sub>SS</sub>-0.3) to (V<sub>IN</sub>+0.3)

\***Notice:** Stresses above those listed under “maximum ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

## PIN DESCRIPTIONS

Pin	Description
$\overline{\text{RESET}}$	$\overline{\text{RESET}}$ output remains low while V <sub>DET</sub> is below the reset voltage threshold and for 300 msec after V <sub>DET</sub> rises above reset threshold.
V <sub>OUT</sub>	Regulated Voltage Output
GND	Ground Terminal
Bypass	Reference Bypass Input. Connecting an optional 470 pF to this input further reduces output noise.
$\overline{\text{SHDN}}$	Shutdown Control Input. The regulator is fully enabled when a logic high is applied to this input. The regulator enters shutdown when a logic low is applied to this input. During shutdown, regulator output voltage falls to zero, $\overline{\text{RESET}}$ output remains valid and supply current is reduced to 30 $\mu\text{A}$ (typ.).
NC	No connect
V <sub>IN</sub>	Power Supply Input
V <sub>DET</sub>	Detected Input Voltage. V <sub>DET</sub> and V <sub>IN</sub> can be connected together.

## ELECTRICAL CHARACTERISTICS

V<sub>IN</sub> = V<sub>OUT</sub> + 1V, I<sub>L</sub> = 0.1 mA, C<sub>L</sub> = 3.3  $\mu\text{F}$ ,  $\overline{\text{SHDN}} > V_{\text{IH}}$ , T<sub>A</sub> = 25°C, unless otherwise noted. **BOLDFACE** type specifications apply for junction temperature (**Note 8**) of -40°C to +125°C.

Parameters	Sym	Min	Typ	Max	Units	Conditions
Input Operating Voltage	V <sub>IN</sub>	<b>2.7</b>	—	<b>6.0</b>	V	<b>Note 7</b>
Maximum Output Current	I <sub>OUTMAX</sub>	<b>300</b>	—	—	mA	
Output Voltage	V <sub>OUT</sub>	— <b>V<sub>R</sub> - 2.5%</b>	V <sub>R</sub> ± 0.5% —	— <b>V<sub>R</sub> + 2.5%</b>	V	<b>Note 1</b>
V <sub>OUT</sub> Temperature Coefficient	$\Delta V_{\text{OUT}}/\Delta T$	—	<b>25</b>	—	ppm/°C	<b>Note 2</b>
Line Regulation	$\Delta V_{\text{OUT}}/\Delta V_{\text{IN}}$	—	0.02	<b>0.35</b>	%	(V <sub>R</sub> + 1V) ≤ V <sub>IN</sub> ≤ 6V
Load Regulation	$\Delta V_{\text{OUT}}/V_{\text{OUT}}$	—	0.5	<b>2.0</b>	%	I <sub>L</sub> = 0.1 mA to I <sub>OUTMAX</sub> , <b>Note 3</b>

**Note 1:** V<sub>R</sub> is the regulator output voltage setting.

$$2: TC_{V_{\text{OUT}}} = \frac{(V_{\text{OUTMAX}} - V_{\text{OUTMIN}}) \times 10^6}{V_{\text{OUT}} \times \Delta T}$$

- Regulation is measured at a constant junction temperature using low duty cycle pulse testing. Load regulation is tested over a load range from 0.1 mA to the maximum specified output current. Changes in output voltage due to heating effects are covered by the thermal regulation specification.
- Dropout voltage is defined as the input to output differential at which the output voltage drops 2% below its nominal value measured at a 1V differential.
- Thermal Regulation is defined as the change in output voltage at a time t after a change in power dissipation is applied, excluding load or line regulation effects. Specifications are for a current pulse equal to I<sub>LMAX</sub> at V<sub>IN</sub> = 6V for t = 10 msec.
- The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction-to-air (i.e. T<sub>A</sub>, T<sub>J</sub>,  $\theta_{\text{JA}}$ ). Exceeding the maximum allowable power dissipation causes the device to initiate thermal shutdown. Please see Section 4.0, “Thermal Considerations”, of this data sheet for more details.
- The minimum V<sub>IN</sub> has to meet two conditions: V<sub>IN</sub> ≥ 2.7V and V<sub>IN</sub> ≥ (V<sub>R</sub> + V<sub>DROPOUT</sub>).
- The junction temperature of the device is approximated by soaking the device under test at an ambient temperature equal to the desired junction temperature. The test time is small enough such that the rise in the junction temperature over the ambient temperature is not significant.

## ELECTRICAL CHARACTERISTICS (CONTINUED)

$V_{IN} = V_{OUT} + 1V$ ,  $I_L = 0.1 \text{ mA}$ ,  $C_L = 3.3 \mu\text{F}$ ,  $\overline{\text{SHDN}} > V_{IH}$ ,  $T_A = 25^\circ\text{C}$ , unless otherwise noted. **BOLDFACE** type specifications apply for junction temperature (**Note 8**) of  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$ .

Parameters	Sym	Min	Typ	Max	Units	Conditions

## 2.0 TYPICAL CHARACTERISTICS

**Note:** The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

Junction temperature ( $T_J$ ) is approximated by soaking the device under test at an ambient temperature equal to the desired Junction temperature. The test time is small enough such that the rise in the Junction temperature over the Ambient temperature is not significant.

## 4.0 THERMAL CONSIDERATIONS

### 4.1 Thermal Shutdown

Integrated thermal protection circuitry shuts the regulator off when the die temperature exceeds 150°C. The regulator remains off until the die temperature drops to approximately 140°C.

### 4.2 Power Dissipation

The amount of power the regulator dissipates is primarily a function of input and output voltage, and output current. The following equation is used to calculate worst case *actual* power dissipation:

#### EQUATION

$$P_D \approx (V_{INMAX} - V_{OUTMIN})I_{LOADMAX}$$

Where:

$P_D$  = worst case actual power dissipation  
 $V_{INMAX}$  = maximum voltage on  $V_{IN}$   
 $V_{OUTMIN}$  = minimum regulator output voltage  
 $I_{LOADMAX}$  = maximum output (load) current

The maximum allowable power dissipation,  $P_{DMAX}$ , is a function of the maximum ambient temperature ( $T_{AMAX}$ ), the maximum recommended die temperature (125°C) and the thermal resistance from junction-to-air ( $\theta_{JA}$ ). The MSOP-8 package has a  $\theta_{JA}$  of approximately 200°C/Watt when mounted on a FR4 dielectric copper clad PC board.

#### EQUATION

$$P_{DMAX} = \frac{(T_{JMAX} - T_{AMAX})}{\theta_{JA}}$$

The worst case actual power dissipation equation can be used in conjunction with the LDO maximum allowable power dissipation equation to ensure regulator thermal operation is within limits. For example:

Given:

$$\begin{aligned} V_{INMAX} &= 4.1V \\ V_{OUTMIN} &= 3.0V - 2.5\% \\ I_{LOADMAX} &= 200\text{ mA} \\ T_{JMAX} &= 125^\circ\text{C} \\ T_{AMAX} &= 55^\circ\text{C} \\ \theta_{JA} &= 200^\circ\text{C/W} \end{aligned}$$

Find:

#### EQUATION: ACTUAL POWER DISSIPATION

$$\begin{aligned} P_D &\approx (V_{INMAX} - V_{OUTMIN})I_{LOADMAX} \\ &= [(4.1) - (3.0 \times .975)]200 \times 10^{-3} \\ &= 220\text{ mW} \end{aligned}$$

#### EQUATION: MAXIMUM ALLOWABLE POWER DISSIPATION

$$\begin{aligned} P_{DMAX} &= \frac{(T_{JMAX} - T_{AMAX})}{\theta_{JA}} \\ &= \frac{(125 - 55)}{200} \\ &= 350\text{ mW} \end{aligned}$$

In this example, the TC1300 dissipates a maximum of only 220 mW; below the allowable limit of 350 mW. In a similar manner, the maximum actual power dissipation equation and the maximum allowable power dissipation equation can be used to calculate maximum current and/or input voltage limits. For example, the maximum allowable  $V_{IN}$  is found by substituting the maximum allowable power dissipation of 350 mW into the actual power dissipation equation, from which  $V_{INMAX} = 4.97V$ .

### 4.3 Layout Considerations

The primary path of heat conduction out of the package is via the package leads. Therefore, layouts having a ground plane, wide traces at the pads and wide power supply bus lines combine to lower  $\theta_{JA}$  and, therefore, increase the maximum allowable power dissipation limit.

# TC1300

## 5.0 PACKAGING INFORMATION

### 5.1 Package Marking Information

8-Lead MSOP

Example:

Part Number	Marking Code (XXXXXX)
TC1300R - 2.5VUA	1300RA
TC1300Y - 2.7VUA	1300YF
TC1300R - 2.8VUA	1300RB
TC1300R - 2.85VUA	1300RC
TC1300R - 3.0VUA	1300RD
TC1300R - 3.3VUA	1300RE

**Legend:** XX...X Customer-specific information  
Y Year code (last digit of calendar year)  
YY Year code (last 2 digits of calendar year)  
WW Week code (week of January 1 is week '01')  
NNN Alphanumeric traceability code  
Ⓔ3 Pb-free JEDEC designator for Matte Tin (Sn)  
\* This package is Pb-free. The Pb-free JEDEC designator (Ⓔ3) can be found on the outer packaging for this package.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

## 5.2 Package Dimensions

**Carrier Tape, Number of Components Per Reel and Reel Size:**

Package	Carrier Width (W)	Pitch (P)	Part Per Full Reel	Reel Size
8-Pin MSOP	12 mm	8 mm	2500	13 in.

# TC1300

## 8-Lead Plastic Micro Small Outline Package (UA) (MSOP)

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

## Sales and Support

### Data Sheets

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Worldwide Site ([www.microchip.com](http://www.microchip.com))

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

### New Customer Notification System

Register on our web site ([www.microchip.com/cn](http://www.microchip.com/cn)) to receive the most current information on our products.

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**== ISO/TS 16949 ==**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC<sup>®</sup> MCUs and dsPIC<sup>®</sup> DSCs, KEELOQ<sup>®</sup> code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
