

The SST12LP07 is a versatile power amplifier based on the highly-reliable InGaP/GaAs HBT technology. Easily configured for high-power applications with good power-added efficiency while operating over the 2.4- 2.5 GHz frequency band, the SST12LP07 has excellent linearity, typically ~2.5% added EVM at 19 dBm output power, while meeting 802.11g spectrum mask at 22 dBm. The SST12LP07 features easy board-level usage along with high-speed power-up/down control through a single combined reference voltage pin, and is offered in a 16-contact VQFN package.

Features

- **High Gain:**
 - Typically 29 dB gain across 2.4–2.5 GHz over temperature 0°C to +85°C
- **High linear output power:**
 - >26 dBm P1dB
 - Please refer to “Absolute Maximum Stress Ratings” on page 5
 - Meets 802.11g OFDM ACPR requirement up to 22 dBm
 - ~2.5% added EVM up to 19 dBm for 54 Mbps 802.11g signal
 - Meets 802.11b ACPR requirement up to 22 dBm
- **High power-added efficiency/Low operating current for both 802.11g/b applications**
 - ~22%/220 mA @ $P_{OUT} = 22$ dBm for 802.11g
 - ~21%/230 mA @ $P_{OUT} = 22$ dBm for 802.11b
- **Single-pin low I_{REF} power-up/down control**
 - $I_{REF} < 2$ mA
- **Low idle current**
 - ~70 mA I_{CQ}
- **High-speed power-up/down**
 - Turn on/off time (10%- 90%) <100 ns
 - Typical power-up/down delay with driver delay included <200 ns
- **High temperature stability**
 - ~1 dB gain/power variation between 0°C to +85°C
- **Low shut-down current (< 0.1 μ A)**
- **Excellent On-chip power detection**
 - <+/- 0.3dB variation between 0°C to +85°C
 - <+/- 0.4dB variation with 2:1 VSWR mismatch
 - <+/- 0.3dB variation Ch1 through Ch14
- **20 dB dynamic range on-chip power detection**
- **Simple input/output matching**
- **Packages available**
 - 16-contact VQFN – 3mm x 3mm
- **All non-Pb (lead-free) devices are RoHS compliant**

Applications

- WLAN (IEEE 802.11g/b)
- Home RF
- Cordless phones
- 2.4 GHz ISM wireless equipment

Product Description

The SST12LP07 is a versatile power amplifier based on the highly-reliable InGaP/GaAs HBT technology.

The SST12LP07 can be easily configured for high-power applications with good power-added efficiency while operating over the 2.4- 2.5 GHz frequency band. This device typically provides 29 dB gain with 22% power-added efficiency @ $P_{OUT} = 22$ dBm for 802.11g and 21% power-added efficiency @ $P_{OUT} = 22$ dBm for 802.11b.

The SST12LP07 has excellent linearity, typically ~2.5% added EVM at 19 dBm output power which is essential for 54 Mbps 802.11g/n operation while meeting 802.11g spectrum mask at 22 dBm. The SST12LP07 can also be configured for high-efficiency operation, typically 17 dBm linear 54 Mbps 802.11g output power at 85 mA total power consumption. High-efficiency operation is desirable in embedded applications such as in hand-held units.

The SST12LP07 also features easy board-level usage along with high-speed power-up/down control through a single combined reference voltage pin. Ultra-low reference current (total $I_{REF} \sim 2$ mA) makes the SST12LP07 controllable by an on/off switching signal directly from the baseband chip. These features coupled with low operating current make the SST12LP07 ideal for the final stage power amplification in battery-powered 802.11g/b WLAN transmitter applications.

The SST12LP07 has an excellent on-chip, single-ended power detector, which features wide-range (~20 dB) with dB-wise linearization and high stability over temperature (< +/-0.3 dB 0°C to +85°C), frequency (< +/-0.3 dB across Channels 1 through 14), and output load (< +/-0.4 dB with 2:1 output VSWR all phases). The excellent on-chip power detector provides a reliable solution to board-level power control.

The SST12LP07 is offered in a 16-contact VQFN package. See Figure 2 for pin assignments and Table 1 for pin descriptions.

Functional Blocks

Pin Descriptions

Table 1: Pin Description

Symbol	Pin No.	Pin Name	Type ¹	Function
GND	0	Ground		The center pad should be connected to RF ground with several low inductance, low resistance vias
NC	1	No Connection		Unconnected pin
RFIN	2		I	RF input, DC decoupled
NC	3	No Connection		Unconnected pin
VREF	4		I	1 st and 2 nd stage idle current control
NC	5	No Connection		Unconnected pin
NC	6	No Connection		Unconnected pin
NC	7	No Connection		Unconnected pin
Det	8		O	On-chip power detector
NC	9	No Connection		Unconnected pin
NC	10	No Connection		Unconnected pin
RFOUT	11		O	RF output
NC	12	No Connection		Unconnected pin
VCC2	13	Power Supply	PWR	Power supply, 2 nd stage
VCCb	14	Power Supply	PWR	Power supply, bias circuit
NC	15	No Connection		Unconnected pin
VCC1	16	Power Supply	PWR	Power supply, 1 st stage

Electrical Specifications

The AC and DC specifications for the power amplifier interface signals. Refer to Table 3 for the DC voltage and current specifications. Refer to Figures 3 through 11 for the RF performance.

Absolute Maximum Stress Ratings (Applied conditions greater than those listed under “Absolute Maximum Stress Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these conditions or conditions greater than those defined in the operational sections of this data sheet is not implied. Exposure to absolute maximum stress rating conditions may affect device reliability.)

Input power to pin 2 (P_{IN})	+5 dBm
Average output power (P_{OUT}) ¹	+26 dBm
Supply Voltage at pins 13, 14, and 16 (V_{CC})	-0.3V to +4.0V
Reference voltage to pin 4 (V_{REF})	-0.3V to +3.3V
DC supply current (I_{CC})	400 mA
Operating Temperature (T_A)	-40°C to +85°C
Storage Temperature (T_{STG})	-40°C to +120°C
Maximum Junction Temperature (T_J)	+150°C
Surface Mount Solder Reflow Temperature	260°C for 10 seconds

1. Never measure with CW source. Pulsed single-tone source with <50% duty cycle is recommended. Exceeding the maximum rating of average output power could cause permanent damage to the device.

Table 2: Operating Range

Range	Ambient Temp	V_{DD}
Industrial	-40°C to +85°C	3.3V
